Briefing: TRS

Intro

These are 3 subproject of a larger project. Please let us know which of the subprojects you feel most comfortable with, or if you feel comfortable doing all of them.

After this subproject is done, we will continue with the next subproject of this project. We have a lot of subproject for this large project.

In general we are looking for someone for the long-term, as we have a lot of projects in our pipeline.

Please let me know if you have any questions 🙂

Generel requirements

- Build as much as possible with native Webflow elements
- Make sure its loading speed optimized
- Needs to work on mobile and should be responsive across all devices
- If you are not sure about something, please ask
- Before delivering the project, make sure you have tested in on yourself and did a proper QA session

- Please have a look at all Figma comments to fully understand the functionality

Subproject 01: [TRS] TRS-herosection

[Figma Design](#)

Subproject 02: TRS-Wavetext

[Figma Design](#)

- It should be possible to duplicate the element and exchange the text and change all colors of all elements. Use case: There will be multiple sections like this, but with different texts and colors.

Subproject 03: [TRS] TRS-slider

[Figma Design](#)

- This subproject was already started by another freelancer, but because he was not capable of finishing it due to personal reasons, we need to get this finished up with another person
- [Webflow read-only-link](#)
- Staging: https://swipper-slider.webflow.io/

- In general, most of this subproject is done but there are still missing important parts like responsiveness. Also it seems to be quite buggy and does not look like the Figma Design in many details.
